Abstract

Stratigraphic units of Cambrian and Tremadocian age from Australia, New Zealand and Antarctica are correlated on the basis of 63 stratigraphic columns presented as 8 correlation charts, of which 8 columns represent Antarctica. Explanatory notes are given, recording in precise form the original reference to the unit, its dominant lithology, thickness distribution, stratigraphic relationship and evidence for its age and correlation. An extensive bibliography pertinent to the Cambrian System in Australasia is appended. -from Current Antarctic Literature

The country consists of two main islands and a number of smaller ones. All of them belong to the large group of Polynesian Islands. As one of the former colonies of Great Britain, now New Zealand is a member of the Commonwealth. It is formally the constitutional monarchy, Queen Elizabeth II being Head of State. The Queen appoints the governor who rules in her name. But, as well as in the UK, the Queen and her representatives have little or no power. In fact, the Prime Minister is the ruler. New Zealand is
