Walter W. Powell. The logic of network forms is explored systematically in order to demonstrate how networks differ from other forms. I cull the literature in a number of social science and management fields and provide examples of a wide range of organizational arrangements that can be characterized as networks. This review affords considerable insight into the etiology of network forms, and allows me to develop a number of empirically disconfirmable arguments about the circumstances that give rise to networks and allow them to proliferate. Markets, hierarchies, and networks are pieces of a larger puzzle that is the economy.
