In this article, Robert Tremmel explores the possibility of enriching reflective teaching and teacher education programs by transcending the limitations imposed by technical and analytic views of reflective practice through the incorporation of non-Western notions of reflection, particularly the Zen Buddhist tradition of "mindfulness." Tremmel discusses Donald Schön's notion of reflection-in-action as an alternative and broader approach to reflection, and connects this approach to central dimensions of Zen teachings. In contrast, the author points out how some teacher education programs committed to reflective practice are not successful because they rely on narrow conceptions of reflection that ignore the need of "preparing our minds" as an initial step towards reflection. Finally, Tremmel draws from his own practice as a teacher educator to discuss his work in teaching students the art of "paying attention" as a way of nurturing reflective practice.

Why Trust Science?
Reflective practice is a process that facilitates teaching, learning and understanding, and it plays a central role in teachers’ professional development. When student teachers carry out systematic enquiry into themselves, they understand themselves, their practices and their students. By constantly looking into their own actions and experiences, they professionally grow in their own. Training of teachers has emerging global trends in education and the overall needs and aspirations of the people. The quality of education depends on the quality teachers and teaching. The way teachers are trained is an important aspect to improve quality. Reflective practice has become a focus of interest and a powerful movement in teacher education.

Abstract Reflective practice is a process that facilitates teaching, learning and understanding, and it plays a central role in teachers’ professional development. When student teachers carry out systematic enquiry into themselves, they understand themselves, their practices and their students. By constantly looking into their own actions and experiences, they professionally grow in their own. Training of teachers has emerging global trends in education and the overall needs and aspirations of the people. The quality of education depends on the quality teachers and teaching. The way teachers are trained is an important aspect to improve quality. Reflective practice has become a focus of interest and a powerful movement in teacher education.
