Here's how I became a Unix administrator long ago. Linux is more of same. I'd say it's 2 steps. First learning to be a user, then an administrator. Next learn basic commands like awk/sed/grep/find/cut. Now get really comfortable doing those same commands in a string of pipes, using xargs to turn the output of one program into the looped input of the next program. `find /home/me -name '*.conf' | xargs awk -F: '{print $2}' | grep -v argh | cut -c1-10 | more`. Find any file in /home/me ending in .conf, print out only the 2nd field of each file data separated by a colon, but don't include any lines containing the word 'argh', and I only want characters 1-10. But if you have some Linux background, administration is just a natural outgrowth of being a user. Becoming good at it is, in fact, hard.
