Astrotheology is that branch of theology that provides a critical analysis of the contemporary space sciences combined with an explication of classic doctrines such as creation and Christology for the purpose of constructing a comprehensive and meaningful understanding of our human situation within an astonishingly immense cosmos. Within the growing field of Religion and Science, astrotheology and its sister subject, astroethics, represent critical responses to the excitement permeating the space sciences, especially astrobiology. The excitement arises because of new searches for microbial life within the solar system and the discovery of exoplanets elsewhere in the Milky Way, some of which may be homes for extraterrestrial intelligent civilizations.

Keywords: astrobiology, astrotheology, exotheology, exoplanet, extraterrestrial life, microbial life, NASA, SETI, Astrobiology Roadmap, soteriology

was the age of Aries, the Ram. Astro-theology is the study of the astronomical origins of religion; how gods, goddesses, and demons are personifications of astronomical phenomena such as lunar eclipses, planetary alignments, and apparent interactions of planetary bodies with stars. ✪ ASTRO-THEOLOGY 101: Christianity and the Astrological Nature of Jesus Christ! ✪ Astro-theology and Great Cycles of Time. ✪ The Astrological Story of Creation. Transcription. The term astro-theology is used in the context of 18th- to 19th-century scholarship aiming at the discovery of the original religion, particularly primitive monotheism. Astro-theology is used by Jan Irvin, Jordan Maxwell and Andrew Rutajit (2006) in reference to "the earliest known forms of religion and nature worship", advocating the entheogen theory of the origin of religion. Contents. 1 Etymology.
