Why Does this Site Require Cookies?

This site uses cookies to improve performance by remembering that you are logged in when you go from page to page. To provide access without cookies would require the site to create a new session for every page you visit, which slows the system down to an unacceptable level.

What Gets Stored in a Cookie?

This site stores nothing other than an automatically generated session ID in the cookie; no other information is captured.

In general, only the information that you provide, or the choices you make while visiting a web site, can be stored in a cookie. For example, the site cannot determine your email name unless you choose to type it. Allowing a website to create a cookie does not give that or any other site access to the rest of your computer, and only the site that created the cookie can read it.

2010. Toward Better Usability, Security, and Privacy of Information Technology: Report of a Workshop. Talks by Butler Lampson and Donald Norman provided workshop participants with an overview of key challenges related to security and usability. Lampson's presentation discussed the current state of computer security and its relationship to usability considerations. Norman's remarks centered on the issue of design as it relates to usability, security, and privacy.
