Phyllagathis stellata (Sonerileae, Melastomataceae), a new species from southwestern Sarawak, Borneo

CHE-WEI LIN, CHI-HUNG LEE

Abstract

Renowned for its high biodiversity and endemism, over one third of the Bornean species of Phyllagathis were discovered in Sarawak over the past two years. In this study, we report an addition of a new species of Phyllagathis, namely P. stellata from southwestern Sarawak. In addition to the taxonomic account, color plates, line drawings, a distribution map, and comparisons with morphologically similar species are provided to aid in identification.

Keywords

Eudicots, Sonerileae, Melastomataceae
