#### Abstract

This research is a part of Values, Outcomes, and Return on Investment of Academic Libraries ("Lib-Value"), a three-year study funded by the Institute of Museum and Library Services IMLS grant # LG-06-09-0152-09. We gratefully acknowledge this support. In addition, the authors wish to thank Jean-Louise Zancanella, our graduate research assistant on this project, for her careful work. Portions of the survey results were presented at the Library Assessment Conference in Seattle, Washington, in August 2014 and will be published in those proceedings; other prepublication presentations took place at the Charleston Conference in November 2013 and 2014 (no proceedings publications are available; this paper represents the sole published culmination of this research).

In these circumstances, humanity has no right to neglect the problem and refuse responsibility. In conclusion, although species become extinct regularly, this may strongly affect the balance in the environment in a negative way at some point; thus, our society should take action. Also, people often create life-threatening conditions for animals, and therefore, ought to proactively prevent their extinction. Book Description: This timely and lucid guide is intended for students and scholars working on all historical periods and topics in the humanities and social sciences--especially for those who do not think of themselves as experts in quantification, "big data," or "digital humanities." The authors reveal quantification to be a powerful and versatile tool, applicable to a myriad of materials from the past. Conceived primarily for historians, the book will prove invaluable to other humanists, as well as to social scientists looking for a nontechnical introduction to quantitative methods. Covering the most recent techniques, in addition to others not often enough discussed, the book will also have much to offer to the most seasoned practitioners of quantification. eISBN: 978-0-8139-4270-4.
