Abstract

Originally published in Contemporary Psychology: APA Review of Books, 1985, Vol 30(7), 570–571. Reviews the book, Behavioral Assessment and Rehabilitation of the Traumatically Brain-Damaged edited by Barry A. Edelstein and Eugene T. Couture (1984). The existing title is misleading in two respects: (a) It suggests more emphasis on “behavioral” approaches than one will find in the book, and (b) the book also covers aspects of rehabilitation of survivors of nontraumatic brain injury. The core issue that will make this book of interest to a broad spectrum of psychologists is the relationship between behaviorism and neuropsychology. Despite its misleading title, this volume contains much that is of both theoretical and practical value. Persons facing the challenges of rehabilitation of the brain injured will want to read most of the chapters. (PsycINFO Database Record (c) 2006 APA, all rights reserved)
